REPORT - ASSIGNMENT 1

HTML PAGE

For Assignment 1, I presented a recipe for a simple dessert that is more nutrient-friendly. As I am passionate about finding recipes people can enjoy with a healthier diet, I decided that a recipe website would be the best choice. I had fun with this assignment and am more interested in learning more about HTML. Regarding the challenges of creating this page, there are three that are worth mentioning:

1. Deciding what to include on the page.

While the assignment criteria were clear on what functions to include, how to arrange them on the page, what information and the design of it all represented a challenge for me.

There are specific rules we must respect while creating a website, and it isn't easy to implement all of them while being content with the page's design.

2. Using ChatGPT proved to be worthless.

When I started to change the page's design, I first asked ChatGPT. There was a simple prompt on how to put the background as an image. Initially, I thought it would be faster to ask AI about this than to search online. Well, that was not the case. The answer was too long; it gave three options, and none of them worked as I thought they would.

From that point, I decided not to use ChatGPT. An excellent resource for all my questions was <https://www.w3schools.com>.

When unsure of what functions to use, I searched for online forums. People from this community are helping you with all your questions.

3. Margins, borders, padding

There is still one "issue" that I did not find an answer to, although I searched everywhere and asked my classmates.

I highlighted certain parts of the text. I wish the highlight would cover not just the text but the entire page width while keeping the text centred.

I have not found the solution yet, but I will try harder.

I know that is just a small part of what HTML means, but it is helpful to learn how to code a website, and I will practice more, mainly because there are so many resources online.

More than that, I consider AI helpful; I have to figure out how to use it to give me good answers.
